

DK9

Perfect alternative to mechanical aiming gear

The DK9 red dot sight allows for fast and accurate aiming, especially from uncomfortable positions, thanks to fast aiming with both eyes using the bright dot.

The red dot has an angular size of 2 MOA or 6cm at 100m distance. The red dot brightness is controlled discretely by the rotary switch (7 positions). The first two positions are reserved for operation with a night vision monocular.

The sight is equipped with the quick-release Picatinny rail mount. Its optics does not imply a magnification (1×), is distortion-free and does not limit the distance between the sight and the shooter's eyes.

DK9 sight is fully compatible with NUMIZMAT night vision monocular ([See more](#)). The sight has enclosed hermetically sealed design with sturdy housing made of aluminium alloy, which provides increased reliability in harsh environmental conditions.

Main characteristics:

- Optical Magnification : 1×
- Red Dot Angular Size, mrad (MOA): 0.6 (2)
- Adjustment Step (Click), mrad: 0.17
- Elevation Adjustment Range, mrad : ±10
- Windage Adjustment Range, mrad: ±10
- Battery Lifetime Depending on Brightness of Red Dot, at 23 °C, hours: 1000-10000
- Weight with battery, kg: 0.3
- Dimensions, (L×W×H), mm: 116×60×75
