

OG-7V

The OG-7V fragmentation round is designed to suppress enemy manpower wearing body armor located in the open, in field shelters and buildings, as well as to engage soft-skinned vehicles.

When detonated, its warhead produces a highly effective fragmentation field with the optimal weight of fragments.

Main characteristics:

- Warhead type: fragmentation
- Caliber, mm: 40
- Round weight, kg: 2,0
- Direct range of fire, m: 170
- Sighting range of fire, m:
 - RPG-7V: 280
 - RPG-7V1: 350
 - RPG-7V1 fitted with UP-7V: 700
- Lethal area against manpower wearing body armor, m²: 150
