

PG-29V

Double Trouble for the Armour

PG-29V is an extremely powerful Tandem HEAT rocket which poses great threat to any tank or vehicle, including those protected with ERA at considerable distances.

PG-29V is an Anti-tank Rocket with Tandem HEAT (High Explosive Anti-tank) shaped charge which allows the operator of the RPG to engage all types of tanks, heavy and light armoured vehicles, reinforced concrete and brick constructions, enemy manpower inside buildings and fortifications. The rocket has great penetration and destructive capacity at distances up to 500m. The Rocket is designed to breach ERA with a Tandem composition and to penetrate homogeneous armour 600mm thick with a shaped charge.

Main characteristics:

- Warhead type: tandem HEAT
- Caliber: 105mm
- Effective Range: 500m
- Weight : 6.7 kg
- Penetration capacity (not less than):
 - Homogenous armor (under ERA): 0.6m
 - Brick: 2m
 - Reinforced concrete: 1.5m
 - Log and Soil: 3.7m
