

"Tor-E2"

Perfect defence of troops and objects

The latest mobile multi-channel short-range ADMS with a large ammunition load of anti-aircraft guided missiles.

"Tor-E2" ADMS is the latest modification of the Tor type ADMS, combining all the advantages of the previous modifications. It has a number of improved tactical and technical characteristics, including doubled ammunition load of the missile system.

"Tor-E2" air defense missile system is designed to defeat fixed- and rotary-winged aircraft; cruise, anti-radar, and other guided missiles; glide and guided bombs, and unmanned aerial vehicles within its range in contested optico-electronic and fire-intensive environment, in all meteorological conditions, day and night.
