

"Igla-S"

Compactness. Mobility. Convenience of combat application.

Implementation of "fire-and-forget" principle, high survivability and stealth of combat operation.

High universality of the system allows you to launch missiles using:

- ▶ launching mechanism;
- ▶ "Dzhigit" support launcher;
- ▶ "Strelets" set of equipment and launch modules (allow launching missiles from various mobile carriers);
- ▶ "Komar" turret installation;
- ▶ "Gibka-S" combat vehicle for the MANPADS squad.

"Igla-S" man-portable air defence missile system is designed to engage all types of visible fixed- and rotary-winged aircraft on head-on and pursuit courses as well as small-sized air targets like cruise missiles around the clock under thermal and background noise.

Find out more about "Igla-S" MANPADS. tel.+7(495) 534 61 83

Main characteristics:

- Range: 500 to 6000 m
- Altitude: 10 to 3500 m
- Target speed:
 - head-on: up to 400 m/s
 - pursuit : up to 400 m/s
- Ready for operation on a signal while on the march: 12 seconds
- Ready for launch after activation : 5 seconds
- Missile features: tracing, passive, infrared bi-spectral seeker:
