

## ABS-BT

### New solution

The ABS-BT provides duplex wireless communication for crewmembers both inside armoured vehicles and outside in a handsfree mode.

The ABS-BT can be used for:

- ▶ interaction between crewmembers;
- ▶ coordination of actions of crewmembers and technical personnel while equipping the vehicle;
- ▶ technical maintenance, test and checkout procedures;
- ▶ coordination of actions of crewmembers with assigned tactical units.

The composition of the system: BSB-BT block; AShR-0,05-BT antenna; NPB-BT lapel wireless switches; UZNPB charging device.

Main characteristics:

- Frequency band, Ghz: 1.88-1.9
- Output power, mw: up to 10
- Coverage area, m: up to 150
- Time of continuous operation, h: up to 8
- Power consumption, W: not more than 15
- Weight of lapel wireless switches, kg: not more than 0.35
