

CVD-115

Border on the Lock

Reliable Perimeter Intrusion Detection for Long-Term Applications.

- ▶ Early warning sensor;
- ▶ Concealed intruder detection;
- ▶ Suitable to protect perimeters with no fencing.

CVD-115 security sensor is a vibration-seismic security detector applied to detect unauthorized attempt to cross the secured area by crossing the perimeter line without any fencing. It instantly transfers fencing or soil vibrations into electrical signal which is then transmitted to the sensor and the sensor generates alert. CVD-115 ensures high detection rate with almost no false alarms.

Main characteristics:

- Secured area length, m: 2 lines x 250m
- Detection rate: 0,95
