

TALISMAN-3

Safe and Sound Waterfront

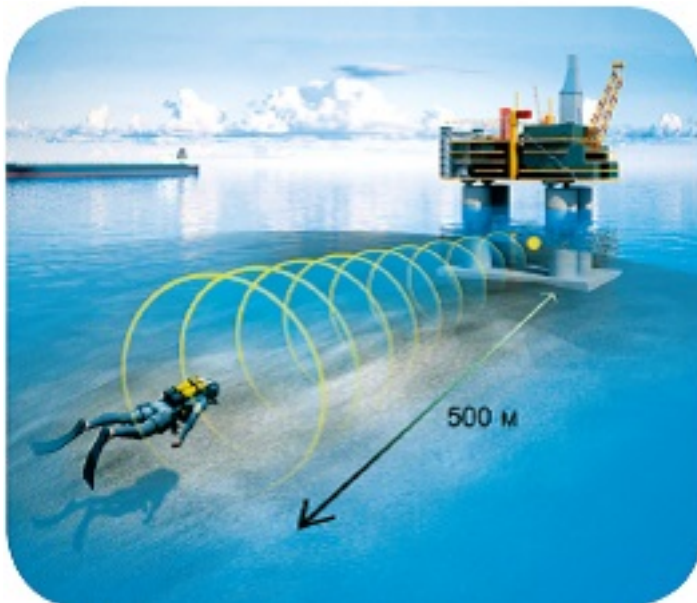

Reliable Detection of Hostile Objects Underwater for Early Warning and Sabotage Prevention.

- ▶ Detection, tracking and classification of underwater objects;
- ▶ Active echo sounding;
- ▶ 500 m guaranteed detection range.

Underwater hydroacoustic detection of objects on the water surface or underwater is a vital element for integrated security system. TALISMAN-3 precisely detects moving underwater objects and unauthorized frogmen within 500 m area ensuring early warning to counteract underwater sabotage attempts.

Main characteristics:

- View angle, °: 0-180
- Operating frequency range, kHz: 50 to 70
- Detection range, m: 500
- Deployment depth, m: 10-60
- Detection accuracy, not more:
 - Range, m: 5
 - Azimuth, °: 6
 - Power consumption, max, kW: 1.5
 - Weight (without cable), max, kg: 300
