Su-30SME

Combat and training efficient

Modern combat aviation complex that combines execution of combat missions with training capabilities.

Supermaneuverable Su-30SME multirole fighter is designed for:

►Enemy's aerial targets engagement in the free air or against the background, ground (surface) targets, infrastructure objects that are located far from the home airfields and covered by ADMS means day-and-night in favorable and adverse weather conditions;
►Aerial reconnaissance;
►Combat employment and piloting training of the flight personnel.

The Su-30SME aircraft ensures effective ADMS defense penetration, it demonstrates great combat capabilities due to significant delivered combat payload. What is more, it has a supermaneuvrability feature that gives Su-30SME an advantage over enemy aircraft.
