

## IL-112VE

### Versatile light transport aviation platform

Perfect for intraregional transportation of light military equipment, materiel, and delivery of manpower. It can be operated from paved and unpaved runways.

IL-112VE Light military transport aircraft is intended for transportation of cargoes, vehicles, machinery, ammunition and manpower. It can be employed for airdropping of paratroopers, materiel and military equipment as well as for medical evacuation of wounded on stretchers.

The IL-112VE represents a high-technology aircraft, due to installation of modern cost-efficient TV7-117ST engines, fitting with modern avionics suite according to a glass cockpit concept and efficient loading-unloading devices.
