

S-400 "Triumph"

Designed for triumph

Large range and high altitude of air targets destruction, multi-channel, high mobility and survivability.

The S-400 air defense system is universal for destroying all types of aerodynamic targets and ballistic missiles with a launch range of up to 3,000 - 3,500 km.

S-400 ADMS is designed for defeating existing and prospective means of air attack:

- ▶ electronic warfare aircraft;
- ▶ airborne early warning and control systems;
- ▶ reconnaissance aircraft acting both in individual capacity and as parts of target acquisition and fire control systems;
- ▶ strategic bombers;
- ▶ tactical, short- and medium-range ballistic missiles;
- ▶ other means of air attack in contested electronic environment.

Find out more about S-400 ADMS. tel.+7(495) 534 61 83

Main characteristics:

- Range (max/min):
 - against aerodynamic targets: 380/2,5 km
 - against ballistic targets: 60/5 km
- Altitude limits (max/min):
 - against aerodynamic targets : 30/0,01 km
 - against ballistic targets: 25/2 km
- Target speed: up to 4800 m/s
- The number of simultaneously engaged targets/ guided missiles:
 - SAM in its full set: up to 80/160
 - separate ADMS (division): up to 10/20
