

## "Pantsir-S1M"

### Effective destruction of any air targets

The latest mobile, multi-channel air defence missile and gun system "Pantsir-S1M" features high firing capabilities, combining all the advantages of the system of the previous modification.

The Pantsir-S1M ADMGS has a number of improved tactical and technical capabilities, including the increased range and altitude of engaged air targets. It is capable of using two types of SAMs (57E6M-E and 57E6-E).

"Pantsir-S1M" ADMGS is designed for air defence of small-sized military, administrative and industrial facilities and areas (including mobile ones) against fixed- and rotary-winged aircraft, cruise and short-range missiles, and precision munitions as well as for strengthening air defense units against massive air attacks.

#### Main characteristics:

- Engagement range for the airplane with radar cross-section of 2,5 sq. m and target speed of 300 m/s:
  - With missiles:
    - range : 1200-30000 m
    - altitude : 15-18000 m
  - With gun armament:
    - range: 200-4000 m
    - altitude : 0-3000 m
- Quantity of simultaneously engaged targets : 4
- The maximum speed of engaged targets : 1000 m/s
