

AK-630M

Outstanding fire power potential

One of the best close air defence system

- ▶ Universal;
- ▶ Substantial fire power;
- ▶ Compact;
- ▶ Ease of maintenance;
- ▶ High reliability.

AK-630M six-barrel artillery gun is distinguished by its high effectiveness in engagement of various targets (aerial attack means, small size sea-surface targets, floating mines, visible unprotected manpower, separate fire emplacements, etc.).

Best cost-effectiveness ratio can be reached when defending sea-surface ships from high-speed low-altitude anti-ship missiles.

Perfect combat and maintenance specifications of AK-630M are proved in long operating experience on ships of the Russian and Foreign Navies.

AK-630M is a reliable system that provides close air defence of a ship from different attack means.

Main characteristics:

- Full mass (with ammunition), kg : 3980
- Ammunition load, un.: 2000
- Range of fire, km : 4-5
- Rate of fire, rpm : 4000-5000
- Angles travers/elevation, deg. : $\pm 180/\dots -8 +82$
- Aiming speed elevation/travers/change, degrees/sec : 70/50
- Types of rounds:
 - HE incendiary round:
 - HE tracer round:
