

"Tunguska-M1"

Effective firing with missile and gun weapons.

Reliable engagement of low-altitude targets with the help of using a joint high-precision interference-free radar system of missile and gun weapons' guidance.

The air defence system takes on combat tasks independently or as a part of a unit in movement, short stops or when placed stationary in any time of the day in any weather conditions. The system consists of tracked chassis with a rotating tower. The armored body protects the crew and equipment from the bullets and shrapnel.

"Tunguska-M1" is constructed for air defence of the ground forces and objects during different kinds of combat operations.
